wikipedia.

HTTP Status code ?

- Status codes are issued by a server in response to a client's request made to the server.
- It includes codes from IETF Request for Comments (RFCs)

Format of status code ?

1xx or 2xx or 3xx or 4xx or 5xx

xx refers to a number with two digits

- All HTTP response status codes are separated into five classes or categories.
- The first digit of the status code defines the class of response, while the last two digits do not have any classifying or categorization role

Format of status code ?

- 1xx informational response – the request was received, continuing process
- 2xx successful – the request was successfully received, understood, and accepted
- 3xx redirection – further action needs to be taken in order to complete the request
- 4xx client error – the request contains bad syntax or cannot be fulfilled
- 5xx server error – the server failed to fulfil an apparently valid request

Continued

1. Informational responses (100 – 199)
2. Successful responses (200 – 299)
3. Redirects (300 – 399)
4. Client errors (400 – 499)
5. Server errors (500 – 599)

Thank You
